

COP2073C Programming Assignment 5

Instructions

- Review Practice Exercise 5 and repeat the tasks using the "cat" function instead of "matrix":
 - Create a descriptive example of use of the function (use ?cat for more information if necessary)
 - Create a data frame demonstrating the 3 types of argument matching using your function example
 - Write the data frame to a CSV file
 - Remove the data frame from your environment
 - Read the CSV file to restore your data frame
 - View the data frame
- Non-Functional Requirements:
 - Include a 4-line ID header at the beginning of your script.
 - Include vertical spacing (a blank line) between logical blocks for readability.
 - Comment your code thoughtfully (avoid excessive commenting).
 - Ensure each line of code does not exceed 80 columns. Use paste0() or paste() as demonstrated in the practice exercise.
